

Phase 0 Differential-Expression Heatmap: Normal vs Heart Failure

Heart Failure = DESeq2 log2FC; Normal = inverse of log2FC

Heart Failure = DESeq2 log2FC (HF / Normal). Normal = inverse of that value. This is a mirrored differential-expression display, not raw expression. * padj < 0.05; ** padj < 0.01; *** padj < 0.001; **** padj < 0.0001.
